

Raman LIDAR at CRLF

Raman LIDAR runs for the FD shift period.

- before FD shift 24 min

- after FD shift 12 min

Raman LIDAR STATUS.

- active channels: AIR, Raman N2, Raman H2O.

Raman LIDAR performances.

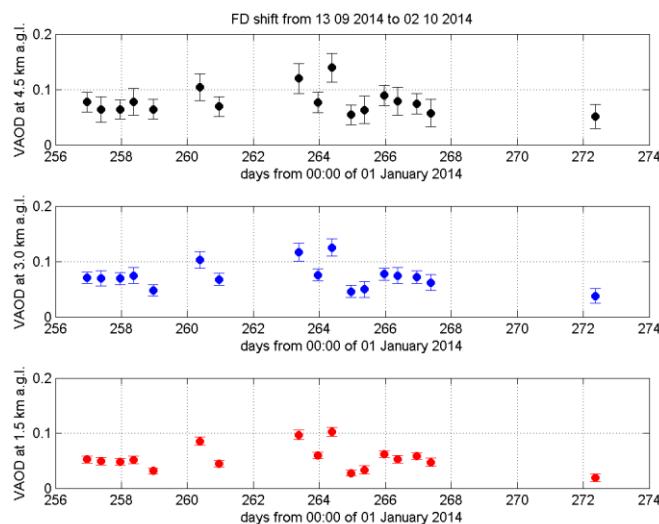

- useful profiles of:

- | | |
|---|------------|
| - VAOD (vertical aerosol optical depth) | = 17 of 39 |
| - aerosol backscatter coefficient | = 17 of 39 |
| - H2O mixing ratio | = 17 of 39 |

- UNuseful profiles due to:

- | | |
|-----------------------------------|------|
| - software/hardware problems | = 9 |
| - precipitation and/or low clouds | = 13 |

Timeseries of VAOD values and corresponding errors at 1.5 ± 0.3 , 3.0 ± 0.3 and 4.5 ± 0.3 km above ground level.

Histograms of VAOD values at 1.5 ± 0.3 , 3.0 ± 0.3 and 4.5 ± 0.3 km above ground level.
